**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 19-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brederveld et al U.S. Patent Number 5,898,679.

Re Claim 1, fig. 1 teaches a WLAN and includes server 105 (wireless communication server); access points 110 (one or more access point) connected to the 105, whereby the 110 wirelessly transmit and receive data to and from MS (remote units) using RF communication such that RS 150 form part of a WLAN, wherein the access points includes a bridging function and filtering table for forwarding of the data to the remote unit. Brederveld et al fails to explicitly teach that the "centralizing filtering and forwarding" function at the server. However, centralizing the filtering and forwarding data at the server would have minimized the complexity and cost of the access points. One skilled in the art would have been motivated accordingly. Therefore, it would have been obvious to one ordinary skilled to move the bridging function of the access point to the server to minimize cost and complexity to the access points.

Re Claims 20, 21, refer to Claim 19, wherein the 106 is a conventional network element for connecting the Server to the access points.

Art Unit: 2616

Re Claim 22, refer to Claim 19, wherein 106 can adhere to a known IEEE 802 standards.

Re Claim 23, refer to Claim 19, wherein the connection to can be direct connection.

Re Claims 24, 25, refer to Claim 19, wherein additional server and access points can be connected to 106 for additional applications and coverage.

Re Claim 26, refer to Claim 19, WLAN uses unlicensed frequency band because its free.

Re Claims 27, 28, refer to Claim 19, wherein the automatic association is standardized in IEEE 802 and based on the MAC address (remote unit identification).

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew Lee whose telephone number is 571-272-3130. The examiner can normally be reached on Monday to Friday from 8:30AM to 6:00PM.
